

How to Reduce Back Pain in Early Years and Preschool Teachers

It's a notoriously difficult challenge - adults being comfortable whilst working at low heights with young children. Trying to accommodate learning and health needs of teaching staff, support staff and young children throughout each and every school day, is not easy but here's **some ideas to help**:

- All early years and preschool staff should have access to an adult height desk/table and chair for administration and regular computer /laptop use. If space is an issue, a height adjustable, mobile laptop table or overbed table are good, affordable options.
- When working at a computer/laptop, the **screen should be level with the top of your eyes**. A screen raiser, separate mouse and keyboard will be needed if using a laptop. A height adjustable chair is required and can accommodate a variety of users. Chair arms are only required to assist users to get in and out of a chair and are not required for use at a desk. If chair arms are required, choose drop down arms so they do not obstruct the user getting close to the desk. **This applies if working from home too**.
- If regularly using a computer/laptop/mobile device for work, a DSE risk assessment is required by law. This explains the concept of "ergonomics" and helps prevent injury. Your H&S officer at school will be able to advise.
- The Healthy Working Move initiative www.ergonomics4kids.co.uk is a free and easy place to start looking for straightforward ergonomics advice. The Healthy Working Move online programmes (apps: Move4kids and Move4Teens) offer simple and effective advice for educators, parents and children. It's recommended staff take a look at these for themselves and for their students.
- **The highest risk factor for experiencing back pain, is already having had it. This makes prevention essential!** Staff should be comfortable before they begin an activity and should STOP and move position if they start to feel uncomfortable. Arrange and organise classrooms and set up learning environments to ensure stooping, bending over and awkward postures are reduced to a minimum. Eg. Move bookshelves which obstruct whiteboards, ensure cupboards have clutter free access, can washing up happen in an adult height sink or in a raised bowl, ensure to be supported before feeding children in your care, do you have easy access to an adult height sink for handwashing?
- All staff should have access to a low, mobile chair if sitting and working at low children's tables. The discs of the spine are extremely vulnerable to twisting and shearing forces which occur when sitting on low static chairs or children's furniture. The Jolly Back chair has been specifically designed for use in schools and nurseries. It is a low, mobile chair with height adjustable back rest and forward sloping seat which help users to get their legs under low tables and improve comfort.
- It's advisable in rooms with very low tables, where adults need to spend a period of time using the table that a couple are raised up with "furniture raisers". These can be easily found through an internet search. Children can work in standing at the slightly higher tables for part of their day.
- Ask children to access and help tidy away their own resources, especially if low down to reduce staff stooping and bending over wherever possible. A litter picker with magnetic pick

A JOLLY BACK IS A HEALTHY BACK

up can help reduce repetitive stooping too. It's ok to stand upright when talking with young children at points throughout the day rather than bending to their height every time.

- Lifting and carrying children, resources and equipment needs great consideration! Ensure manual handling training has been completed, is up to date and covers the movement of children. A helpful reference and to supplement hands-on training is the "BackChat" resource.
- Choose and use equipment which is easily mobile and has lockable castors eg sand/water trays with a plug so water can be removed without lifting, cots with adjustable sides which can be operated by an adult with one hand or use beds/mats which enable children to climb in and out with minimal assistance – try to reduce lifting where ever possible.
- Use ramps to wheel equipment where available, it will only take a few extra minutes and can really help your back. It's beneficial to push trolleys rather than pull them. A cost-effective removable ramp for shed and storage areas is to use a portable wheelchair ramp, this is particularly helpful if using shared premises.
- When changing young children, is essential changing stations have unrestricted access to the changing area and supplies to allow all adults using them easy, free movement. Worktops should be at adequate height to reduce stooping over. Consider changing stations which incorporate steps for children to use to help reduce lifting wherever you can.
- If carrying a single strap bag (including a handbag), wear it across your body (not on one shoulder) and swap sides regularly. Two bags of similar weight carried in each hand or a rucksack worn on both shoulders are also another good options. A wheeled trolley case or crate may ease the manoeuvre of books and equipment if there are limited stairs. Try to repack your bag every night so you are only carrying what you need.
- Back pain and emotional wellbeing are interlinked. It's essential you feel supported at work and voice concerns if you're feeling cumulative strain injury (aches and pain coming on over time). If you are finding an activity difficult, it's highly likely colleagues will be too. Prevention of injury is key, so it really does help to speak with your line manager.
- Rest and movement breaks are essential to health so it's important to take them. Try to limit sitting to 30 minutes before a stretch and move. Think 30:30 (30 minutes sitting to 30 seconds moving).
- A supportive leadership team and workplace culture are essential to protect and improve staff health and wellness. Does your organisation have a wellbeing or wellness group? or could you start one to discuss ideas and share new initiatives?
- There are always solutions! A classroom and workplace risk assessment can be requested (contact your Health and Safety officer) if you are experiencing pain. Recommendations can hugely improve your working environment when implemented.
- Download the free Jolly Back Musculoskeletal Health Toolkit which will help identify target areas for improvement within your organisation and offer simple suggestions to help improve back health.

A JOLLY BACK IS A HEALTHY BACK

- As with all areas of physical and mental health, back health is improved with good nutrition, exercise, adequate sleep and hydration – remember, you are important! Improved health and happiness gives us all the ability to cope with challenges and enjoy the day ☺.

All the best and as always if we can help further, we'd love to hear from you,
Lorna Taylor, Physiotherapist and Director, Jolly Back
